Penn Transplant Institute

KIDNEY/PANCREAS TRANSPLANT EVALUATION CLINIC

LOCATION AND PHONE NUMBER:

Penn Medicine Radnor
250 King of Prussia Road
Radnor, Pennsylvania

For appointments, call: 215.662.6200

Appointments for Penn Medicine Radnor are made for the third Thursday of each month.

TRANSPLANT SERVICES

Transplant nephrologists on the medical staff at the Hospital of the University of Pennsylvania and nutritionist are available to see potential kidney transplant candidates in Penn Medicine Radnor. Patients will receive an educational session followed by a detailed history and physical and a multidisciplinary evaluation plan. Information and findings from the evaluation process will be subsequently presented to the selection committee at the Penn Transplant Institute at the Hospital of the University of Pennsylvania.

Note: The Penn Medicine Radnor location will decrease the number of visits requiring patients to travel to Philadelphia. Patients may need to visit the Hospital of the University of Pennsylvania for procedures and tests that cannot be performed locally and to meet the entire transplant team prior to listing.

ABOUT THE PENN TRANSPLANT INSTITUTE'S KIDNEY TRANSPLANT PROGRAM

The Penn Transplant Institute's Kidney Transplant Program is the largest in the region and consistently outperforms the national averages for patient and organ survival. Penn Transplant Institute's outcomes are excellent and compare favorably with local, regional and national statistics. The Penn Transplant Institute's outcomes can be found online at www.SRTR.org.

The Penn Transplant Institute is pleased to offer a unique program for patients who have a living donor that is incompatible. The program, called paired kidney exchange, matches kidney transplant recipients who have an incompatible donor with another recipient and donor who are in the same situation. Paired exchange programs can also take place with more than two pairs – creating multiple transplants called chains. These programs increase the number of transplants and decrease the time spent on the deceased donor transplant waiting list.
